

Avoid golfer injury – avoid costly court cases

Does your golf course have blind shots? How would your existing warning system stand up to scrutiny in court if a golfer sustained serious injury? TeeSafe™ may be the technology for your course to ensure the safety of golfers.

The TeeSafe™ solar-powered hazard Warning System is an advancement on the traditional bell system used for blind shots on a golf course. TeeSafe™ prevents injury to golfers by activating a large visible bank of LED lights when golfers are playing from blind regions.

TeeSafe™ is simple to operate. When play commences in the blind region, a golfer activates the system and the warning lights flash continuously until all golfers have left the region. The lights cease flashing when the blind region is clear.

The wireless technology ensures ease of installation. TeeSafe™ is priced from \$600.

Invest in TeeSafe™ to:

- Avoid the risk of injury to golfers
- Avoid court costs and damages
- Meet OH&S obligations
- Prove a strong commitment to safety
- Reduce public liability premiums
- Maintain reputation as a safe course
